## Understanding the recent polio outbreaks

By Ryan Hyland and Teresa Schmedding

Outbreaks of vaccine-derived polio have been reported this month in the Democratic Republic of Congo and Syria, according to the World Health Organization.

At least 17 cases were identified in Syria and at least four in Congo. In both countries, health officials are working with the Global Polio Eradication Initiative to respond immediately to the outbreaks with supplementary immunization activities and field investigations.

To prevent the virus from spreading further, investigations and immunizations are also being strengthened in neighboring countries, the World Health Organization said.

Despite the new cases, the push to eradicate polio is stronger than ever, with fewer cases reported so far this year than ever before. It also got a boost last week at the Rotary International Convention in Atlanta, Georgia, USA, where donors pledged \$1.2 billion for the effort.

Vaccine-derived cases are rare, and they differ from wild cases. **Full Story at Rotary.org**
